Pettinhouse.com - DirectGuitar 3.0 FREE - Mute&Slap patch.

Than k you to download this Free library.

Mute&Slap is a free to use library which comes from DirectGuitar 3.'0 FULL version.

It is made for playing muted guitar grooves.
You can combine muted passages with slapped notes just by playing harder on your keyboard in order to introduce a slapped note.

The amp and the FX section is full activated. You can use the distortion, the ED, Reverb, Delay, Phaser, play notes with Wah Wah effect just by clicking on the button "Wah l Mod. Wh." on the main page and move up and down your modulation wheel.

Tip: Use it with the sustain pedal. When you want to slap the note release the Sustain pedal in order to avoid to sustain a slapped note which is usually played very short.

Use the Dry button if you want to use this library with your external favorite amp simulator.
